

Environmental and Energy Policy

Environmental Protection and Energy/Carbon saving reductions start at the top, with the Board. The Board will make sure everyone has the support, training and resources they need to implement this policy.

OUR VISION

To minimise the environmental impact of our operation by preventing pollution and adopting sustainable policies. At the same time increase energy efficiency of our vessels and terminals and reduce our energy consumption through a formal programme of energy and carbon saving measures.

OUR ACTIONS

Review our environmental and energy objectives and targets annually to measure performance and continual improvement.

Communicate this policy to all our colleagues, ensure they understand the environmental and energy impacts of their job and how to minimise these.

Encourage energy efficiency and good energy and carbon management in our supply chain.

Be transparent about our environmental and energy performance and costs, publishing information on waste, energy use, energy costs and greenhouse gas emissions annually.

Participate in regulatory energy reportable schemes as required such as ESOS and MRV.

Support the purchase of energy-efficient products and services and designs for environmental and energy performance improvements.

If incidents happen which have an environmental impact, we will record, report and investigate fully, making sure we learn lessons and improve for the future.

We will work with local communities and be a responsible neighbour.
